Enough is enough, as an American Tax Payer its high time to settle with Microsoft !

Microsoft products have helped more individual citizens, small businesses and developers of new businesses than any other software company.

With Microsoft's "User Friendly" software [the best available] countless millions of Americans enjoy and personally benefit from the resources available from their computers and their corresponding access to the internet.

Microsoft has brought a "new world" to a vast number of Americans. We must allow them to continue to invent and bring new beneficial products to market.

Our Country is now at war and we can no longer afford to seek frivolous, politically induced, judicial remedies for manufacturers of inferior products. Let the disgruntled competitors produce something better - and let the market place [the everyday buyers and users] make the ultimate decision as to which product will help them the most.
